

MOBILE SEEDLING STATIONS

Référence : FLSMOEA

The whole purpose is to enhance the wet grape pomace. FLDI mobile deseeding stations have a throughput of 80 tonnes per day.

Description technique :

FLDI mobile deseeding stations work directly on wet grounds (saving time, transport and energy) with a dirt quality of 10%. The tromeles (cylindrical screens) are self-cleaning to avoid soiling. 2 tromeles of 6 meters, one of 4 meters, with several grid sizes. The throughput is 80 tonnes of seeds / day or 3.3 tonnes of seeds / hour. Removable machines are placed here as close as possible to production
